

NAME

`mda-dump` – dumps entire contents of MDA files to standard output

SYNOPSIS

`mda-dump` [`-hv`] *file*

DESCRIPTION

`mda-dump` is a utility for dumping the entire contents of binary MDA data files, which are created by `saveData` in `EPICS`. The output format is odd, but it follows exactly the format of the file itself. Unless one of the options is used, `mda-dump` needs only *file*, the name of the MDA file.

This program is useful for debugging other programs that interact with MDA files.

OPTIONS

- `-h` Show the help screen.
- `-v` Show the version information.
