

**NAME**

`mda-dump` – dumps entire contents of MDA files to standard output

**SYNOPSIS**

`mda-dump` [**-hv**] *file*

**DESCRIPTION**

**mda-dump** is a utility for dumping the entire contents of binary MDA data files, which are created by **saveData** in **EPICS**. The output format is odd, but it follows exactly the format of the file itself. Unless one of the options is used, **mda-dump** needs only *file*, the name of the MDA file.

This program is useful for debugging other programs that interact with MDA files.

**OPTIONS**

- h** Show the help screen.
- v** Show the version information.

**AUTHOR**

Dohn A. Arms
