CMLOG SERVER

Run on Gateway (for Example) or another unix box.

Server Startup Script is provided

New database files periodically created (not circular, old messages preserved)
 Given a request for a time, it knows which file to look in for historical data.
 cmlogDbaseChangeInterval 1440

 Logging clients and Browsers use 2 environment variables to connect:
     CMLOG_HOST   (optional)
     CMLOG_PORT   (optional)

The server waits for connections at a configured port
  cmlogServerPort   9003   (defined at Server startup)

Multiple servers possible in same lan.
